## Prefert® Vaginal Gel

A lubricant that supports your natural fertility and helps to conceive.

Every seventh couple's wish for a baby remains unfulfilled. One possible reason: an acidic pH during a woman's fertile days (ovulation).

On most of the days of a woman's cycle, the pH in the vagina is 4 to 4.5 and is therefore acidic. This pH offers protection against infections, but, at the same time, gives sperm almost no chance to survive.

As a result, the pH changes during a woman's fertile days: at 7 to 7.5 during this phase of a woman's cycle, it lies in the neutral to alkaline range. The ideal environment for sperms to find their way to eggs ready to be fertilised. If, during a woman's fertile days, the pH does not lie within a sperm-friendly range, sperm do not get very far and are no longer capable of fertilisation. Natural fertility is compromised.

Thanks to **Prefert®**, prospective parents are able to conceive at home by natural and pleasurable means – far away from expensive and lengthy treatments at fertility centres (IVF clinics).

## Fertility jump-start

**Prefert® Vaginal Gel creates an environment in which sperm has the best chances of reaching a woman's eggs.** With a neutral pH of 7.2, **Prefert®** protects sperm from a too acidic environment, thereby ensuring their survival.

Its osmotic properties provide optimum room for manoeuvre. Sperm motility is boosted. The ideal jump-start for sperms to successfully find their way to a woman's eggs.

### Properties:

- odorless
- tasteless
- water-soluble
- colorless
- does not make spots
- free of parabens and silicones

**Prefert®** promotes sperm activity at the time of ovulation:

- Provides an optimal environment for sperm.
- Ideal pH for natural conception.
- Improves mobility of sperm and reduces the osmotic barrier to optimize the sperm cells migration.
- **Prefert®** Vaginal Gel improves osmolarity.

The improved formula contains no parabens and no silicones. **Prefert®** Vaginal Gel is available in over 20 countries.

If the use of **Prefert®** vaginal gel causes irritations or discomfort, stop the use of this product and ask your healthcare provider. If you have had recently any vaginal surgery, ask your healthcare provider before use. Do not use **Prefert®** vaginal gel, if you have an active vaginal infection.
